

AI Career Memory Assistant (Solo Version)

1. Authentication

GitHub OAuth Login

User clicks:

Login with GitHub

Backend:

- Django REST Framework
- OAuth flow
- Store GitHub access token securely

After login:

Dashboard

2. Repository Fetching

Fetch:

- Repository name
- Description
- README
- Languages
- Topics

Example:

AI-Career-Memory-Assistant

Fundraising-App

WhatsApp-Drive-Assistant

This is one of the coolest parts because it automatically builds the user's portfolio profile.

3. Repository Analysis

AI analyzes repositories and extracts:

Skills:

- Django
- React
- PostgreSQL
- REST APIs

Experience:

- Authentication
- Database Design
- API Development

Instead of the student manually describing everything.

4. Project Selection

User selects:

- ✓ Fundraising App
- ✓ AI Career Assistant
- ✓ WhatsApp Drive Assistant

Not every repository.

Only relevant ones.

5. Job Description Input

Paste Job Description

Example:

Backend Developer Intern

Requirements:

- Python
- Django
- Docker

- PostgreSQL

6. AI Job Analysis

Extract:

Required Skills:

- Python
 - Django
 - Docker
 - PostgreSQL
-

7. Project Matching Engine

Compare:

Repositories

VS

Job Requirements

Output:

Fundraising App: 91%

WhatsApp Assistant: 74%

Weather App: 42%

This was a core feature from the original planning document.

8. STAR Resume Bullet Generation

Example:

Developed a Django-based fundraising platform with authentication and PostgreSQL integration, enabling secure donation tracking.

9. Interview Question Generation

Example:

How did you implement authentication?

Why did you choose PostgreSQL?

How would you scale this API?

10. Project Summary Generation

Example:

This project demonstrates backend development, database design, authentication, and API integration.

11. Career Decision Assistant (Hackathon Feature)

This is the page that makes the project fit the challenge much better.

Gap Analysis

Missing:

- Docker
- AWS

Readiness Score

Backend Internship Readiness

78%

Multiple Paths

Option 1:

Apply Now

Option 2:

Learn Docker First

Option 3:
Build Cloud Project

Tradeoffs

Apply Now
+ Faster
- Lower Match

Learn Docker
+ Stronger Candidate
- Delays Applications

Recommended Action

Learn Docker and deploy one project
before applying.
